

Notes:

1. The circuit may be used for either N-channel and P-channel MOSFET devices, observing correct polarity.
2. N-channel needs +5V at V terminal while P-channel needs -5V at V terminal.
3. Match the MOSFETs to within 3.75V of gate voltage at 50mA of drain current.
4. Match the MOSFETs to within 4.06V of gate voltage at 200mA of drain current use heatsink on device.
